

WHY CHOOSE Switch2?

We are one of the UK's most experienced and capable providers of prepayment, metering and other related services to community and district heating schemes.

We make a success of schemes owned by local authorities, housing associations, private landlords and industrial & commercial customers.

SMART M-BUS

We offer a full range of automatic meter reading (AMR) solutions to suit all applications including Smart M-Bus AMR.

The data can be used for individual meter reading management or if required for producing billing information for customers.

**Are You Aware Of
The Heat Network
(Metering And Billing)
Regulations 2014?**

HEAT NETWORK (METERING & BILLING) REGULATION 2014

Operators of community and district energy schemes need to be aware of the Heat Network (Metering and Billing) Regulation 2014.

This legislation is in respect to the supply of centralised heat, cooling, hot water and cold water.

The regulations state that a meter must be situated at a heat exchanger in the building or at the point of entry of the district heat network pipes into the building. This type of meter is generally known as a bulk meter. There is also an on-going obligation to continuously operate, properly maintain and periodically check for errors.

Switch2 can help your organisation comply with the directive through the supply of bulk meters for your energy centres and plant rooms.

Applying a meter at the point of entry will enable you to measure efficiency and energy loss on your systems, enabling you to make improvements as required.

Switch2 offers a comprehensive service to help energy suppliers with all their metering and billing requirements. We can provide the technical expertise to survey your site and provide recommendations on the correct type of meter to be installed at your site. We will advise on the optimum location to enable you, or administer on your behalf, accurate and reliable automatic meter reading systems to assist in bill generation. Switch2 can look after all your billing requirements.

HEAT METERS

Landis+Gyr ULTRAHEAT/COLD T550 (UH50)

High-precision ultrasonic heat meter

The T550 heat, cold or combined heat/cold meter has been designed specifically for the varied applications of heat and cooling measurement. It meets the special requirements of district heating and cooling, local heat and building installation.

This MID and RHI approved ultrasonic meter is precise, powerful and can be provided with a variety of communication and power options.

Sizes from 15mm - 150mm diameter.

We offer a wide range of bulk meters for energy/heat, water, gas and electric and can provide a solution for any requirement.
