Blinds.**

**Make the most of
outdoors**

Designed, engineered and built to last

Using extruded aluminium for the framework which is both corrosion resistant and highly durable, along with drop forging/pressure die casting for the joints and stainless steel components to hold everything together, our awnings are **strong and resilient**, some would say over engineered, we simply say built to last.

Fabrics are woven using the finest solution dyed colourfast fibres, designed to last a lifetime. An invisible protective coating around the fibres prevents dirt and water from clinging to the surface, therefore creating a **self clean effect**, ensuring our materials stay clean and dry, in pristine condition.

Motorised operation via a wirefree transmitter allows

you to **effortlessly extend and retract** your awning, maximising its use, while the addition of ambient sensors including light & wind detectors, automatically position your awning dependent on the climatic conditions.

An array of finishes, styles, colourways and options are available to choose from allowing you to design your very own bespoke awning that is **tailored specifically to meet your taste and requirements**. For re-assurance and peace of mind our awnings are all extensively and rigorously tested to ensure they will withstand everything that is thrown at them. Certified to both TÜV and European standards our awnings meet and exceed the most stringent quality demands.

of your
r space

Enhance, protect and prolong the use of your terrace

Practical and stylish like a roof outstretching our awnings extend to provide the **ultimate alfresco living space**. Offering protection from the sun's intense heat our awnings keep you cool on even the hottest summer days whilst offering shelter from those unexpected and often persistent rain showers*. Damaging ultraviolet rays are blocked providing optimum protection to the skin whilst harsh light is filtered to stop unwanted glare.

The adjoining internal room also benefits as our awnings stop the sun's heat rays reaching the glass, reducing solar heat gain and **naturally cooling the internal environment** along with protecting furnishings from bleaching by the sun, all whilst maintaining the view.

Optional accessories including ambient lighting and infra-red heating enable you to use your terrace long into the evening, whilst our pull out side screens provide **added seclusion and privacy**. Our variable valance awning additionally offers protection from low winter sun.

Add an eye catching and striking new dimension to the façade that allows you to **entertain in style and sophistication** come shower or shine, summer or winter, day and night.

*Subject to pitch of 14 degrees or greater as set out in European Directive EN13561 to ensure effective rain run off.

The Outdoor Living Pod is a unique pergola structure with an adjustable and waterproof louvered roof that allows you to use your terrace all year round, irrespective of the weather – **sun, wind and rain.**

The innovative louvered roof when closed is fully waterproof keeping you dry underneath. An invisible guttering hidden within the structure framework provides effective drainage of water from the roof. At the touch of a button the **rigid louvers rotate upto 160° to provide precise sun control and ventilation**; keeping you cool no matter how intense the sun's rays, cutting out glare irrespective of the angle of the sun to provide comfort to your eyes and blocking the sun's damaging UV rays to ensure your skin remains safe.

Optional heavy duty roller blinds, neatly concealed within the structure framework containing a unique zip locking mechanism lower to provide **side sun protection and privacy** from prying eyes whilst also acting as an insect screen. And lighting and heating add-ons mean that even when the light level drops or the chill starts to creep in, you can continue to use the Outdoor Living Pod comfortably.

Finished in a stunning textured polyester powdercoated finish, the **Outdoor Living Pod brings a touch of class to any location** and its superstrong aluminium and stainless steel construction ensures it will withstand the bumps and knocks of even the busiest environment.
