

metroSTOR **PSH** Mobility Scooter Storage & Charging Hub

metroSTOR Mobility Scooter Storage & Charging Products

metroSTOR PSL, PSM and PSH are a modular product system providing compliant, secure storage and charging solutions for mobility scooters. Our units are designed to look great, with a robust, easy-to-use functionality that makes them ideally suited for locations close to building entrances. From a single locker type unit to a communal hub building, metroSTOR products can be configured for the exact storage and charging fit.

metroSTOR PSH Mobility Scooter Storage & Charging Hub

metroSTOR PSH is a communal hub for the compliant storage and charging of mobility scooters in a single accessible location. There are a number of advantages to this type of storage facility where the space available and the type of site management permits.

metroSTOR PSH is a modular building design with easy to configure specification, offering great value, proven product strength, short lead times and a wide range of options for cladding, trims, roof type and internal layouts. At metroSTOR we are firmly of the belief that outdoor storage facilities do not need to be hidden from view and our products are designed to complement the surrounding building fabric.

The ease of specification extends to our factory assembled lighting and charging points with metroSTOR installation scope providing all necessary enabling works as required.

With fire safety a central consideration for the storage and charging of mobility scooters, metroSTOR PSM can be specified with a number of fire retardant cladding options in accordance with fire risk assessments where the unit will be sited close to residential buildings. Our Fireboard MgO internal liner option with either HDPE 100% recycled plastic or coated steel panel outer cladding provides Euro-class A1, UK class 0 reaction to fire and are panels manufactured from materials of limited combustibility throughout to provide 30 minutes fire resistance as BS 476.

Reduced Fire Risk

Fire Retardant cladding options for BS EN 13501 / BS476 Compliance within standard unit design.

Fast Set-Up

Prewired integral charging and LED internal lighting units are factory tested for no-hassle site installation.

Cladding & Finishes

metroSTOR PSH panel module cladding can be specified from a wide range of standard designs.

Flexible Design

14 standard unit dimensions accommodate from 4 to 16 mobility scooters for storage and charging with a wide range of configuration options and custom builds for further capacity.

Access Control Options

Door panel module allows for multiple configurations within the unit. A number of manual locking, mechanical or powered keypad and powered door control options can be specified.

Durable Construction

metroSTOR products are manufactured to ISO9001:2008, ISO14001 and BS EN 1090 CE Marking designed and manufactured for long life. The all-steel frame is Hot-Dip Galvanised to BS EN 1461.

Automated Entry & Opening Systems

metroSTOR PSL, PSM and PSH models are available with integrated, low energy automation systems for either sliding or hinged doors operated using a number of DDA compliant controller and locking options.

All metroSTOR automatic entry and opening solutions are fitted with DDA compliant signage, clear vision panels (where relevant) and door entry equipment specification. Safety sensors ensure automatic doors cannot open or close if obstructed and are fitted with a manual break-out facility in the event of power failure or an emergency.

Latch + Eurocylinder Key Lock

- Self-Latching Daybolt
- Eurocylinder Key-operated Self-Latching Bolt Lock

Latch + Code Secure Lock

- Code Secured Entrance
- Mechanical Code Lock

Fire Safety

metroSTOR products can be specified to meet relevant fire risk assessment criteria. Our fire retardant options for TGV and sheet type cladding have a Fireboard MgO internal liner with either treated SW timber, HDPE 100% recycled plastic or coated steel panel outer to provide Euro-class A1, UK class 0 reaction to fire. The panels are manufactured from materials of limited combustibility throughout to provide 30 minutes fire resistance to BS 476. Where fire retardant properties are required for an open-spaced cladding type, SE timber plank can be specified with an HR Prof treatment process providing a Euro-class B, UK class 0 Reaction to Fire classification.

metroSTOR is the leading outdoor storage system for today's built environment, delivering social, economic and environmental value. Combining superb aesthetics with durability for the toughest environments, metroSTOR offers a configurable, modular product system to comprehensively address the challenges of outdoor storage; from waste and recycling bins, mobility scooters and cycles to household items, site equipment and service plant enclosures.

Mobility Scooters

metroSTOR PSL, PSM and PSH provide space-efficient, mobility scooter storage with user-friendly integral battery charging, making for safer communal areas while helping users to maintain their independence.

Waste & Recycling

metroSTOR PBL, PBM, PBE, PBC and PBH products help control waste-streams with robust enclosures and stores for all standard bin sizes. Their smart appearance and unobtrusive physical profile enable recycling centres to be located in spaces that may not have previously been considered.

Household Items & Site Storage

metroSTOR PTL, PTM and PTH are tough, versatile products providing attractive, secure storage for equipment and bulky items in an unobtrusive design. Highly configurable for capacity, layout, access, security and finishes, the proven modular system makes for ease of specification.

Cycles & Motorcycles

metroSTOR PCL, PCM and PCH for custom cycle parking solutions with the efficiency of modular build from transit shelters to cycle hubs. Stands, racks and carousels can all be specified with a number of options available for roofing, enclosure and layout type, finishes and access control.

Service Plant & Industrial

metroSTOR Custom Build is driven by the inherent design flexibility of our products, working in partnership with client input informing the design process. This enables the development and delivery of effective solutions, achieving a consistent design aesthetic.
