

KEEP YOUR TRAILER FROM LOOKING LIKE THIS.

United Trailers' exclusive UniGuard Protection System is designed to stop premature aging and damage. UniGuard is not just a coating, but a complete system designed to prolong the life and appearance of United Trailers.

Today's wet applied Magnesium Chloride road de-icers aggressively attack trailers and other vehicles even more than typical road salt. They can cause premature paint and undercoating failure that results in:

- Accelerated rust and corrosion
 - Metal component wear
 - Loss of structural integrity
 - Increased maintenance costs

The UniGuard Protection System is standard on every United Trailer and is designed to protect your trailer from the adverse effects of the elements.

Elements of the UniGuard system include:

- US Military Grade Undercoating
- 3 step paint process that includes proper metal prep, primer application and gloss topcoat application
- Production process control and quality audits

Enjoy the peace of mind that comes with owning a United Trailer today! To learn more, call 800-637-2592 or visit www.united-trailers.com.
