

REPLAY REVIVE®

NEGLECTED

Restores the performance and appearance of synthetic sports surfaces for maximum life expectancy.

REVIVED

Reasons to use **REPLAY REVIVE®**

- **RESTORES** porosity, playing performance (ball roll and bounce) and player comfort - our state of the art machines remove contaminants, reduce compaction, enhance porosity and maintain excellent surface health.
- **REGULAR** maintenance extends the life expectancy of pitches and their income generation capabilities.
- **REVENUES** are maximised - with proactive, planned maintenance costly repairs and emergency treatment can be avoided and as the facility downtime is minimised.
- **REDUCES** health and safety risks - **REPLAY REVIVE®** reduces compaction and improves grip and drainage minimising the risk of injury.
- **REINFORCES** your commitment to the health and safety of end users.
- **REFRESHING** service from courteous, professional and fully NVQ trained operatives - all employed directly by Replay. To ensure the best service for clients Replay does not use sub-contracted labour and service teams have CRB and pre-qualified MoD security approval.
- **RELIABILITY** - use of the best Revive machines and processes currently available.
- **REAL** experience with a track record that covers eight years and thousands of maintenance projects.

The **REPLAY REVIVE®** process extends the life of a synthetic sports pitch and minimises the risk of injury to players by improving grip and reducing compaction.

Regular, planned maintenance massively reduces repair and replacement costs by keeping surfaces in excellent condition.

REPLAY REVIVE® is also as effective on water-based carpets or polymeric surfaces - removing surface dirt even in the wet.

REPLAY REVIVE® -

How does the process work?

1

Customised and self-contained vans adapted to carry our bespoke maintenance machinery throughout the UK.

2

Arrive at pitch and remove debris including litter and leaves that if left will decompose into the surface and lead to drainage and performance problems.

3

Utilising our bespoke machinery, our trained operatives can configure the front and rear attachments depending on the condition of the surface.

4

The rotating brush can be set to penetrate the surface to a defined depth lifting and filtering the infill removing the contaminants.

5

The integral turbine vacuum within the machine will extract out the fine contaminants from the infill.

6

Where required on 3G surfaces, sprung tines can be used for decompacting the infill improving surface performance.

7

Finally the mounted rigid brush is used on the surface to redistribute the infill resulting in a perfectly groomed finish.

8

On completion, the surface will be cleaner and the pile more vibrant; adding longevity, aesthetic and play value to the pitch.

"...since the implementation of the maintenance programme, usage of the facility has significantly increased. The pitch surface is now considerably better to play on and is proving easier to maintain due to the professional maintenance of the carpet pile."

Kelly Ellis, Head of Football Development, Leicestershire FA.

"...I know Replay will do the work when they are scheduled to, in a safe and professional manner, and the quality is excellent so it's one less thing I and my groundsmen have to worry about."

Shirley Bowman, Edinburgh Leisure.
