

# Telehandler Case Study

TAWMIX

Founded in 1990 to provide a dedicated wood recycling service for the corporate sector, public sector and private clients in the South West, Tawmix Timber Products provides a cost effective, environmentally friendly service for the disposal of wood waste materials; aiming to recycle virtually all materials received in to the Winkleigh based depot.

The company collects or accepts deliveries of all types of waste wood from pallets and packaging, off cuts, demolition through to household wood waste and works with large national waste management companies, civic amenity sites, builders and skip companies helping them to dispose of their waste ethically and responsibly.

Materials handling is provided by a JCB TM310 Telemaster which is now fitted with SG Revolution Super Cushion Solid Tyres to the front and rear. The 1300-24 SG SE tyres provide a puncture free solution to working on site where typical hazards include nails, wood splinters and metal shards; all problematic for normal pneumatic tyres. Julian Tolley is Company Secretary of Tawmix and is delighted at the solution the SG tyres provide for his business;

**“We had been trying different tyre options on our machines – none of which were proving very successful. I visited ITWS at a waste and recycling show in September 2011 and placed an order for a set of tyres to see if they were as good as they claimed. We haven’t looked back since; these new tyres not only outlast all the other options we tried; they never puncture and, even if there’s a slight bit of damage to the tyres, they keep working. I cannot recommend SG Revolution tyres highly enough and the service I get from ITWS is also excellent.”**

SG Revolution super cushion tyres are manufactured from a hard wearing compound and feature larger, deeper lugs and two rows of apertures built in to the side wall of the tyres. Specifically designed to work productively over rough ground there are sizes and tread patterns for a variety of machines and conditions.
