1 Precautions

1.Transportation Security

No heavy stress, violent vibration or water splash are allowed during transportation, storage. The unit should be transported in separated packing. In shipments of distributor and delivery of maintenance, any damages caused by integral packing are not covered by warranty.

2.Installation

Avoid heavy stress and violent vibration during installation. Don't touch the dome cover directly by hand. When connecting the power source, please follow all electric safety standards and only use the power supply designated for this device. Keep the video and control signal in a decent distance from high voltage devices and cable. Don't apply power to the dome before finishing the installation.

3.Internal Environment

Keep metal and inflammable material away from dome body to avoid fire, short circuit and damage. Please prevent all liquids material from entering the dome. If occur this, please shut down the power and pull out the plug. Then inform the technical personnel immediately.

4. Electrical Safety

The video image would be interfered when the dome is installed near television, radio transmitter, voltage changer and audio amplifier.

Camera Protection

Avoid shooting very bright objects directly into the camera's CCD (such as the sun or light fittings).

6. Cleaning Method

Please don't use abrasive and violent detergent to clean the dome. Please choose dry fabric and neutral detergent. Use lens paper to clean the lens.

2 Features

2.1 Built-in Decoder

- 220 programmable presets
- 8 cruising tracks, each cruising track has 32 preset positions
- 4 pattern tours, each one with 600s memory
- RS-485 bus
- 8 groups of auto scan, the left and right boundary and scan speed can be set
- Pelco P and Pelco D HS compatible
- 4 alarm inputs and 2 outputs
- Guard location, the dome can operate preset, auto scan, cruising and pattern tours functions after a short pause
- Alarm triggering, the alarm can trigger preset, auto scan, cruising and pattern tours functions.

2.2 Integrated Universal Speed Change Rotator

- Delicate stepping motor, stable, sensitive and accurate
- 360° continuous pan without blind area
- Stepless speed change, auto zoom/speed matching
- Auto overturn function
- Manual speed: Pan: 0.01°- 180°/S
- Presets calling speed :350°/S

2.3 Built-in High Definition Day/Night Camera

- Auto iris, auto back light compensation
- Auto/manual white balance
- Auto/manual focus
- Auto/manual brightness control
- Multiple kinds of camera for options

2.4 All-weather Outdoor Design

- Built-in heater
- Built-in fan, can operate in 60℃
- High Die-cast Aluminum Construction
- IP66 water proof
- 3000V lightning and surge current proof

2.5 Function Instructions

Focus / Pan / Tilt Speed Auto Match

The pan/tilt rotation speed could be auto adjusted according to the focus in/out, which makes it great performance for manual target tracking.

Auto Flip

The lens can auto flip when it rotates 180°

Preset Position Setting and Calling

Preset function means the speed dome can memory current pan/tilt angel, focus, zoom, ect. When need, it can be called upon directly. Our speed dome support up to 220 preset positions.

Auto Scan

Users can set the left and right boundaries by control keyboard. Then speed dome can scan between it. It can set up to 8 groups scan path.

Pattern Tour

Speed Dome can memory 180s running path or 500 orders. When start pattern tour, speed dome can track as recording path. It supports 4 groups pattern tour.

Guard Location

The dome will rotate back to preset position after a period of vacant time.

Privacy Protection Function

Set black areas to mask the privacy or security parts. The black areas location can be set, and support up to 8 mask zones.

• Timing Running Function

Users can set speed dome operation task at different time during one week.

Motion Detection Function

For some special cameras, the dome can auto track the moving things.

3D Location Function

In dome effective zoom scope, can zoom in and out any area on screen, also can move any point to center.

Auto Tracking Function

IR speed dome can automatically ock and tacking the moving object according to the parameters setup.

Lens Control

Zoom Control

Users can control zoom by keyboard to get near or far images.

Auto Iris Control

Auto sense ambient light, and make quick adjustments.

Auto Back Compensation

In the bright background, auto compensate light for the target, and adjust the back light.

Auto/Manual White Balance
 Auto/Manual adjust depending on the environment light changes.

Day and Night Switch (Only for Day/Nigh Camera)
 Speed dome camera can auto switch between color and black and white.

High Speed Dome Menu Setup (Only for camera with menu)
 Call upon preset No.95 to enter into menu setup interface. Press "Focus" to choose menu items and press "Iris" to set menu contents.

Alarm Function

It supports 4-channel alarm input and 2-channel alarm output.

3 Technical Data

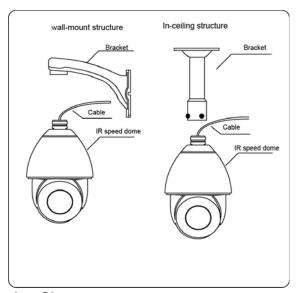

PowerPower Supply	DC12V & 5A
Operating Temperature	Indoor: $0\sim50^\circ\text{C}$, Outdoor: $-35\sim60^\circ\text{C}$
Operating moisture	< 95%
Power Consumption	Indoor: 15W, Outdoor: 55W
Communication	RS-485 bus
Communication transmission speed	2400/4800/9600BPS
Protocols	Pelco-D, Pelco-P,HS
Pan speed	0.01°-180° /s
Titlt Angle	0 -90°
Pan/Tilt Accuracy	+/- 0.05°
Preset Speed	350°/s
Pan Angle	360° Continuously
Auto Filp	auto flip 180° when tilt angle is 90°
Preset Positions	220
Auto Scan	8 Groups
Cruise Track	8 Groups
Cruise Points Qty per cruise group	32 Preset Positions
Pattern Tours	4 Groups
Alarm	4 alarm inputs and 2 outputs
Privacy Zone	8 zones
Protection	IP66 water proof/3000V lightning proof

4 Installation Guide

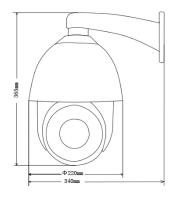

4.1 Installation Preparation Video Coaxial Cables

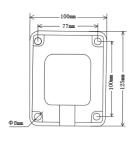

Mode	Max Distance
RG59/U	750ft(229m)
RG6/U	1,000ft(305m)
RG11/U	1,500ft(457m)

4.2 Structure

4.3 Installation Size

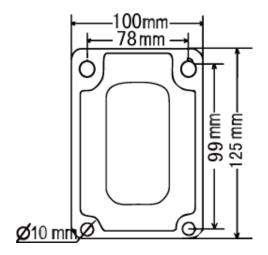

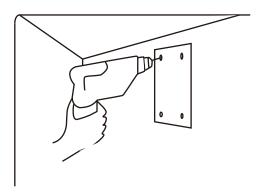

4.4 Installation Procedures

*Notice: The wall must be thick enough to install the expansion screws and can bear 4 times the weight of the dome camera itself.

(1) Bore 4 holes by using templates included on the wall.

(2) Mount 4 M8 expansion screws into the holes

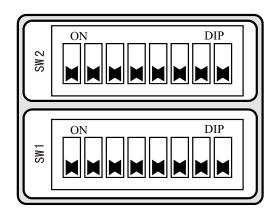

(3) Put the cables through the bracket. Fix the dome base and the bracket with M5 screws.

(4) Use screw-caps and shims to fix the bracket on the wall.

5 Dome Setting

Before the dome is installed, the communication protocol, baud rate and dome address, should be confirmed. Set the DIP switch, keeping the setting consistent with the control system. The relative DIP switch site and connecting wires are diagramed below for reference.

SW1 is address setting switch, SW2 is protocol setting switch. Note: SW2-6 Soft address enable bit; SW2-7 120 Ω .

Protocol Setting

Protocol	SW2-1	SW2-2	SW2-3	SW2-4

7 The OSD Menu Setting

Operation Method of the Menu:

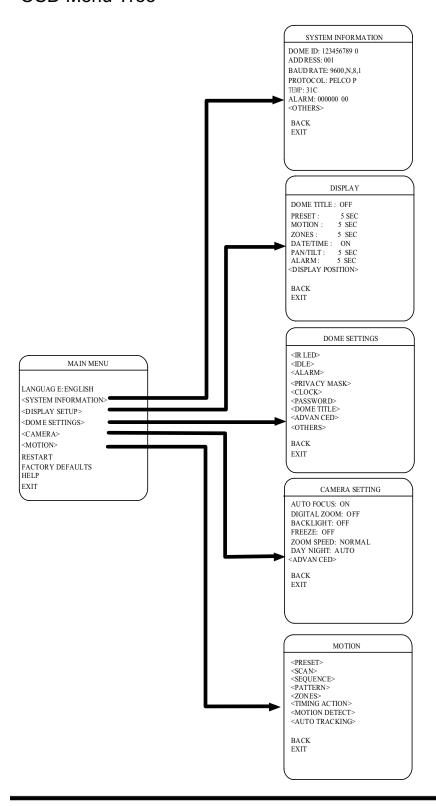

- 1.Access main menu (call preset 95).
- 2.Use the joystick to position the cursor beside menu selection.

NOTE:

If your controller does not have a joystick, use the up or down key.

- 3. Press Iris Open, the submenu/cursor moves to the right.
- 4. Move the joystick up or down to view selections.
- 5. Press Iris Open to make selection.
- 6.Press Iris Close to cancel selection.

OSD Menu Tree

LANGUAGE

MAIN MENU

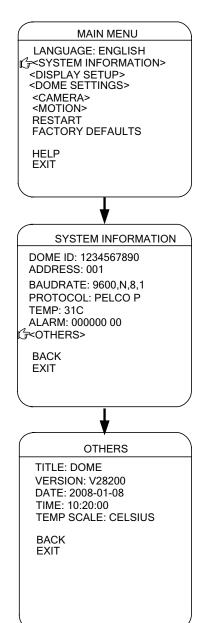

HELP EXIT The language for the on-screen menus is selectable. Available languages include English and Chinese.

To change the display language:

- 1. Use the joystick to position the cursor beside LANGUAGE.
- 2. Press Iris Open. The cursor moves to the right, beside the current, selected language.
- 3. Move the joystick up or down to view selections. Press Iris Open to enter selection.

All on-screen menus are changed to the selected language.

SYSTEM INFORMATION

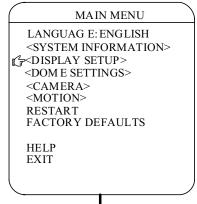

The System Information screen displays dome drive model, software version, and other diagnostic information. System settings cannot be changed using this screen. This screen is for reference only.

Use the following steps to display the System Information screen:

- Use the joystick to position the cursor beside SYSTEM INFORMATION.
- 2. Press Iris Open. The SYSTEM INFOR-MATION screen opens.

DISPLAY SETUP

Display setup allows you to program how labels are displayed on the monitor.

The following settings are available for each label:

OFF Label is not displayed when

activated.

ON The label is continually

displayed when activated.

2 SEC The label is displayed for 2

seconds after activation.

5 SEC The label is displayed for 5

seconds after activation.

10 SEC The label is displayed for

10 seconds after activation.

BACK EXIT

ENABLE

Move the cursor to to enable or disable the privacy mask zone.

SET

Move the cursor to SET and press Iris Open to enter the edition mode of privacy mask zone.

Then the sentence "PRESS IRIS OPEN TO CONFIRM" will be displayed on the monitor. Use joystick to move the dome to the area you want to cover and press IRIS OPEN to confirm. There will be a privacy zone in the middle of the monitor. Move joystick up, down, left and right to adjust the size of privacy zone.

PRIVACY MASK

MASK NO.: 1 ENABLE : OFF <SET>

DELETE

BACK EXIT

DELETE

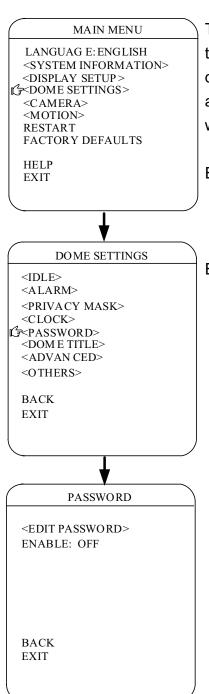

Move the cursor to DELETE and press IRIS OPEN to delete the current privacy zone.

CLOCK

The clock is used to program the current date and time. The date and time set in the Clock menu is used to program events. The date and time can also be displayed on the monitor when the menus are not being accessed.

PASSWORD

The dome features password protection to prevent unauthorized changes to the dome settings. An operator cannot access any of the dome settings menus without a valid password.

EDIT PASSWORD

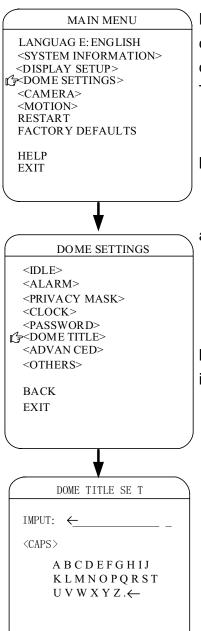

At least one character must be entered to create a valid password.

ENABLE

ON Enable password protection.

OFF Disable password protection.

DOME TITLE

CANCE L

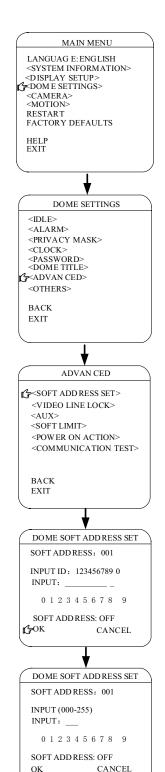

OK

Dome title is the label used to identify the camera viewed on the monitor. Up to 12 characters can be used for a title.

To edit the title text label, do the following:

- 1.Use the joystick to position the cursor beside DOME TITLE.
- 2.Press Iris Open.The text input window appears on the monitor.
 - 3.Enter text.
- 4.Use the joystick to position the cursor beside OK,press Iris Open,the text inputed will be saved.

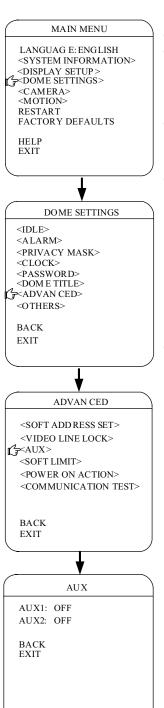

SOFT ADDRESS

Dome support soft address function, use this function bit 7 of setting switch 2 must be set to "on". In this case, address setting switch 1 will be ignored.

- 1.Before setting soft address,dome id should be inputed. Use the joystick to position the cursor beside "0 1 2 3 4 5 6 7 8 9", press Iris Open, move joystick left or right to select number, press Iris Open, the number selected will be inputed on the upper line.
- 2.Enable or disable soft address function.Use the joystick to position the cursor beside "SOFT ADDRESS:ON/OFF",press Iris Open to enter edition mode,move joystick up or down to select ON or OFF,press Iris Open to confirm.
- 3.Use the joystick to position the cursor beside "OK",press Iris Open to confirm the dome ID has been inputed.
- 4.Use the joystick to position the cursor beside"0 1 2 3 4 5 6 7 8 9",press Iris Open.move joystick left or right to select number,press Iris Open,the number selected will be inputed on the upper line.
- 5.Use the joystick to position the cursor beside OK,press Iris Open to confirm. Then follow the direction display on the screen.

AUX

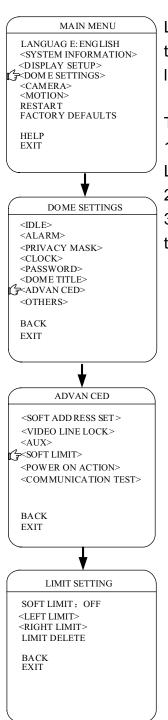

An auxiliary output is a programmable signal from the dome back box that can trigger another device to operate. An auxiliary output is programmable to trigger from an alarm or from a controller.

An AUX 1 command from the controller will activate the relay in the dome and operate the device that is connected to the relay. The output of AUX 1 can be connected to the alarm input of a system switch to activate automatic monitor switching and recording.

An AUX 2 command from the controller will place a ground at the output of AUX 2 to operate the device that is connected to it.

SOFT LIMIT

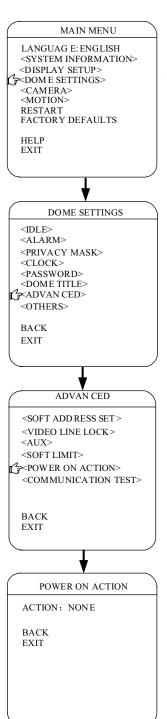

Limit stops are programmable stops that limit the pan range of the dome. There must be two limits, a left and a right, to define an area.

To set manual or scan stops:

- 1.Use the joystick to position the cursor beside LEFT LIMIT or RIGHT LIMIT.
- 2.Press Iris Open.
- 3. Follow the directions displayed on the monitor.

POWER ON ACTION

This setting defines a specific activity (scan, preset, pattern) to be performed in the event the power to the dome is cycled.

The following settings are available:

NONE No action.

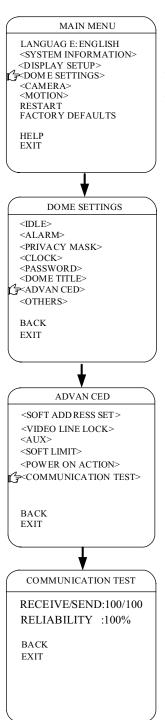

PRESET Dome goes to preset 1.

SCAN Dome starts auto scan operation.

SEQ Dome runs sequence 1.

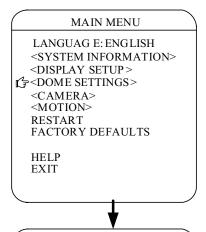

PATTERN Dome runs pattern 1.

COMMUNICATION TEST

Use our special software user can test the reliability of the dome control line. After testing, the reliability value 0-100 will display on the screen.

- d. Press Iris Close to guit the edition.

PATTERN

PATTERN

PATTERN NO.: 1 TITLE : PATTERN 1 START <SET> DELETE

BACK EXIT A pattern is a memorized, repeating series of pan, tilt, zoom, and preset functions that can be recalled with a command from a controller.

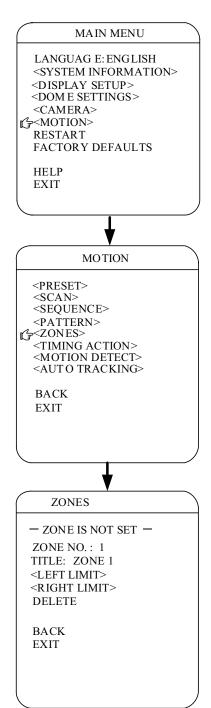

To program a pattern:

- Use the joystick to position the cursor beside PATTERN NO. Press Iris Open. The cursor moves to the right.
- 2. Move the joystick up or down to view selections. Press Iris Open to enter selection.
- 3. Use the joystick to position the cursor beside SET.
- 4. Press Iris Open. The Patterns programming window appears on the monitor.
- 5. Follow the directions displayed on the monitor.

To delete a pattern:

- 1. Use the joystick to position the cursor beside DELETE.
- 2. Press Iris Open.

ZONES

Horizon dome systems are capable of eight zones, each with a 12-character label.

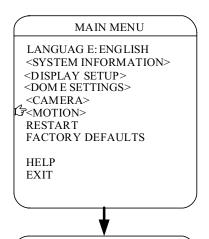

To program a zone:

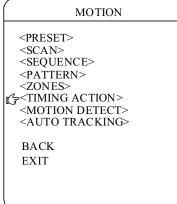

- 1. Use the joystick to position the cursor beside ZONE NO. Press Iris Open, and the cursor moves to the right.
- 2. Move the joystick up or down to view selections. Press Iris Open to enter selection.
- 3. Use the joystick to position the cursor beside LEFT LIMIT,RIGHT LIMIT.
- 4. Press Iris Open. The zone programming window appears on the monitor.
- 5. Follow the directions displayed on the monitor.

To delete a zone:

- 1. Use the joystick to position the cursor beside DELETE.
- 2. Press Iris Open.

TIMING ACTION

	TIMING	ACTION	
NO.	START	STOP	MOTION
1	00:00	00:00	NONE
2	00:00	00:00	NONE
3	00:00	00:00	NONE
4	00:00	00:00	NONE
5	00:00	00:00	NONE
6	00:00	0 0:00	NONE
7	00:00	00:00	NONE
8	00:00	00:00	NONE
OFF	MON	COPY	BACK

SCHEDULE NO.

Schedule Number of a day 1-8.

START

Start time of timing action.

STOP

Stop time of timing action.

MOTION

Select timing action during designated periods of time: NONE,PRESET 1-8, SCAN 1-4, SEQUENCE 1-4, PATTERN 1-4

ON/OFF

Enable or disable timing action function. Use the joystick to position the cursor beside ON or OFF. Press Iris Open to enter edition mode. Move joystick up or down to select ON or OFF, press Iris open to confirm.

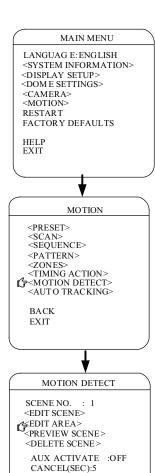

COPY

User can copy a schedule to other 6 days in a week.

BACK

Go back to upper menu.

MOTION DETECT

SCENE NO.

Select motion detection scene number 1-8.

EDIT SCENE

Set motion detection scene.

EDIT AREA

Edit detection areas, four motion detection areas can be defined.

PREVIEW SCENE

Preview motion detection scene and areas.

DELETE SCENE

Delete motion detection scene.

AUX ACTIVATE

Motion detection can be programmed to trigger an auxiliary command when motion is detected. The following are the settings for AUX ACTIVATE: OFF.

AUX 1、AUX 2.

CANCEL TIME

Cancel time is the length of time the auxiliary will remain on after motion is detected.

AREA NO.

Select motion detection area number 1-4.

AREA EDIT

Edit motion detection area on the screen.

DELETE

Delete motion detection area.

SENSITIVITY

Set the sensitivity of the motion detection area. The following are the settings for SENSITIVITY: LOW.

MID、HIGH.

AREA DISPLAY

The following are the settings:

ON Display the area on screen after motion is detected.

OFF Do not Display the area after motion is detected.

EXIT

SENSITIVITY

Set the sensitivity of tracking:

HIGH The sensitivity level is high.

MID Average sensitivity.

LOW The sensitivity level is low.

TARGET

Set the tracking target size:

LARGE The tracking target size is large.

MID Average target size.

SMALL The tracking target size is small.

ZOOM MATCH

Zoom match allows the user to define a limitation on the amount of telephoto zoom durning target tracking.

ENABLE

ON Activate auto tracking function.

OFF Deavtivate auto tracking function.

TRACKING SCENE SET

Set the preset scene that the auto tracking function start from.

RETURN TIME

Set the length of the time the dome return to auto tracking preset scene after the last detection of motion target on the screen.

BACK EXIT We could set the IR LED on or off and option mode via IR LED setting manual.

1.CONTROL MODE

AUTO: IR LED could turn on or turn off automatically based on the light:

TIMING: IR LED could control the light based on it's turn on or turn off:

ON: IR LED forced open; OFF: IR LED forced off.

2.OUTPUT: Move the cursor to "OUTPUT", then Press "iris on" to enter setting mode and move joystick to choose the mode ,which including "STANDARD" 、"NORMAL"、"HIGH LIGHT" ,then press "iris on" to confirm .

3.ENHANCED: Move the cursor to "ENHANCED", then Press "iris on" to enter setting mode and move joystick to choose the mode ,which including "DYNAMIC" \"STATIC", then press "iris on" to confirm.

4.NEAR POWER:IR Led wide-angle near power setting.

5.FAR POWER : IR Led narrow-angle far power setting.

6.SCENE CONTROL: IR Led will reduce the power to standby power when open "SCENE CONTROL" ,and IR LED will enhance the power to normal power when moving objective appear in screen ,so it's effectively improve the IR LED life .

7.STANDBY POWER: IR Led will enter to standby power when open "SCENE CONTROL".

8.DETECT SENSITIVITY: Setting sensitivity of detecting moving objective when open SCENE MODE.It could be set by LOW ,MID and HIGH .

9.OPEN SENSITIVITY :Setting sensitivity of detecting light strength when IR LED automatically on/off ,It could be set by 1-5 .

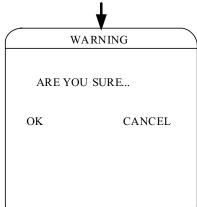

- 10. COMPENSATION1: if the zoom is 1x ,we could open far power to compensate the light to enhance the performance via NEAR COMPENSATION 1.
- 11. COMPENSATION2: if the zoom is 1x, we could open far power to compensate the light to enhance the performance via NEAR COMPENSATION 2.
- 12. START TIME: To set the time when IR LED turn on .
- 13. STOP TIME: To set the time when IR LED turn off.

RESTART

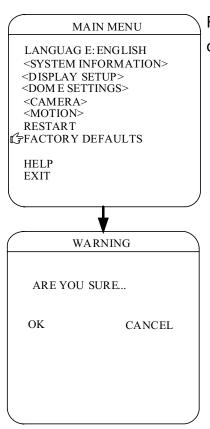

RESTART SYSTEM

Reboot the system if it is not operating or if there is no control. Rebooting the system will cycle dome and camera power without changing programmed dome settings.

FACTORY DEFAULTS

Restore factory default settings of the dome.
