

The Garage Spa – commitment to care for the environment.

The Garage Spa is committed to providing a luxurious experience for our guests in a safe and comfortable environment we are also aware of our responsibility for the environment and do our best to minimise any negative impacts from our daily operation.

Our facility uses the space that was a former filling station and many original features were retained and incorporated into the design to be a feature of the spa. The spa garden has been created to provide a quiet oasis of calm where spa guests can enjoy the natural ambience in the fresh air as part of their experience.

We are committed to:

- Reducing our use of plastics, through products and packaging and especially single use plastics and no longer provide plastic bags for swimwear.
- We aim to recycle effectively and reduce the amount of waste we produce as part of our daily operation.
- Reducing our use of paper and print and will be introducing tablets for the management of all guest communications.
- We seek to use products and suppliers* who demonstrate a commitment to the environment and work in a way which minimises their impact on the planet.
- Our key suppliers are committed to reducing their use of plastic packaging.
- Wherever possible we source our food from local suppliers.
- Whilst delivering a luxury experience we ask guests to be mindful in their use of towels.
- Our team understand the importance of working in a way that promotes care of the planet and minimise our negative impact as a business.
- As a business we comply with all relevant environmental legislation.
- When reviewing our utility providers we are committed to seeking greener sources of fuel whilst managing the cost to the business.

This policy statement and our practices and procedures will be renewed regularly to ensure we remain committed to our care of the planet and minimising our impact on the environment.

* **Germiaine de Capuccini** our chosen treatment product house have always actively embraced environmental care in the development of their products, all of their ingredients are sustainably and ethically sourced. As part of the CO2Zero project they were the first professional skincare company committed to compensating and reducing CO2 emissions, they do not use microbeads in any of their products. As of July 2019 they have removed cellophane and printed inserts from all of their products,
