Sales Order Pad - helping you to get more from your Sage solution.

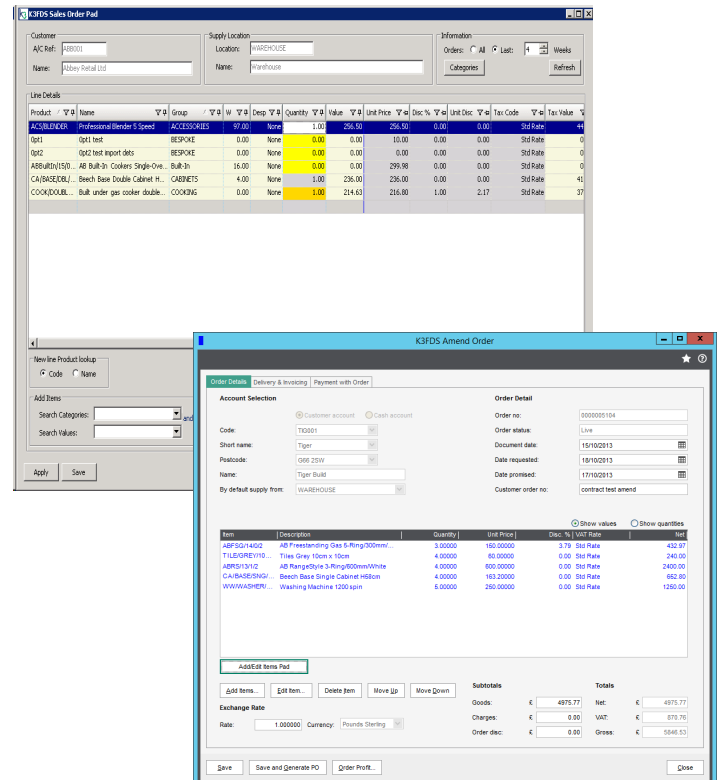

Sage 200

Sales Order Pad from K3 is a great addition to Sage 200 allowing you to speed up the sales order entry process.

Tailor your views so you only focus on what you need to see, from sales order history to products currently on order.

Business benefits

- ◆ Easy to use with minimal training needed
- ◆ Customise your sales order entry screens
- ◆ Provides users with a view of current orders
- ◆ Provides users with a full view of historic sales
- ◆ Items can be added using a search category look up
- ◆ Multiple category search

Whether it's a relatively small step forward, or an ambitious change of direction, we'll be the partner to deliver systems which meet your exact needs.

Specialising in ERP, CRM, BI and Managed Service solutions we have offices in England, Wales, Ireland and worldwide helping over 400 customers reach their goals.

Speed up the sales order entry process

Ease of Adding Items

A new button called "Add/Edit Items Pad" is added to the sales full order entry screen.

Items can also be added by search category lookup. So if you sell "French" or "Italian" products then you could select from just Italian products. You can use multiple search categories too. So all Italian products that are "Food" items could be returned, for example.

View Previous Orders

Once you've opened Sales Order Pad you can select the number of week's history to view (or view all sales history for that customer) meaning you can discuss previous purchases with customers – useful for increasing repeat sales.

In the previous sales history view, some columns are read only others can be edited. Columns can be dragged and dropped to display information in a particular order.

You can choose from the fields that are displayed so only relevant information is shown, allowing you to tailor your view.

You can see vital information such as how many are currently on order, or when the customer last bought the product.

Price, quantities and products are returned in the sales order form.

Say goodbye to...

- Lack of visibility of previous orders
- Time wasted on manual order entry
- Lack of insight into previous customer purchases
