

ELITE EVACUATION CHAIR

With a four-point harness and cushioned armrests, the Elite evacuation chair provides more security, especially for those lacking upper body control. The chair instantly deploys into a 4-wheel evacuation chair and provides an easy transfer with correct height integral supportive seat, safety brakes on rear wheels and a sturdy high capacity frame for sustained use. Another unique benefit with the Elite evacuation chair is known as 'Freewalk' design providing more space for the operator to walk behind the chair than any other evacuation chair available.
