

Process Automation and Information System Specialists

**DCS/PLC/SCADA • Process Control • Automation • Application Software
Information Systems • Systems Integration • Communications & Networking**

Op-tec Systems is a privately-owned company, which has served the process and manufacturing industries since 1996.

Supplying engineering services for the entire automation project lifecycle, Op-tec offers innovative solutions for continuous control, batch, sequencing, data acquisition and wider industrial applications.

Working closely with our client's own staff, Op-tec provides:

- Appropriate and cost-effective automation solutions
- Open access to process information for business management and control
- Flexibility for future integration with other systems and equipment
- Quality documentation for validation, compliance and maintenance
- Long-term commitment and support

How we work

We measure success on whether our clients have achieved the outcome they were seeking; for example: reduced downtime, increased efficiency or adding a new capability.

We deliver cost-efficient solutions with attention to detail, consideration to the suitability and longevity of the resulting system, and ease of maintenance/upgrade at a later date.

We exceed customer expectations by always ensuring the desired benefits of a project are clearly defined at the outset, and achieved before work is declared complete.

It is our intention to build long-term trusted relationships based on our expertise and integrity
