

Pouches & Storage

Endless Combinations: Increased flexibility, modularity, capability and reliability

Individual pouches are one of the most critical features of modern load carriage. Every pouch we design is unique. Built specifically for its intended equipment and in accordance with end users and OEM requirements.

CQC's design team are constantly developing new and innovative techniques in the design and development of storage pouches. As more and more equipment is developed and more and more burden is placed on today's dismounted users, it is becoming increasingly important for designs to challenge the traditional boundaries of pouch storage and to reduce weight and increase capability at every stage.

Each of our designs are unique and bespoke. Ranging from man portable communication storage complete with built in protection and full and easy access to critical functions and features. To quick release ammunition and battle winning equipment solutions.

All of our pouch systems are built with the highest grade materials and designed to fulfill exacting requirements and perform in the harshest of environments.

Every design is built to ensure everything that is carried remains fit for purpose and users trust their storage and carriage to react first time, every time without fail.

Load carriage is the cornerstone of CQC's approach to Soldier Systems, ensuring that users can operate as effectively as possible without compromising on protection and reliability.

CQC have developed a strong reputation as a world leader in the design and manufacture of high quality and modular field bergans and DCC Patrol Packs.

Our designs have been in service across major tier one and tier two militaries around the world for over 20 years and have earned a deserved reputation for innovation, design and quality.

Field bergans & DCC Packs range from 120L large carriage systems, to smaller more specific 20L systems. All of our systems are designed to be modular in their approach and to support a wide and diverse range of requirements and capability.

Adequate internal mission specific and personal storage space is critical for today's modern users. CQC's design team have developed a number of unique and innovative design features into our field bergans & DCC Packs for a wide and diverse range of end users. These can range from SOF or dismounted infantry roles to vehicle and armoured crews. Each have very unique requirements while all striving to have a common system approach to maximise integration and capability.

Pouches & Storage

CQC's vastly experienced design team and rapid prototyping department are uniquely experienced in developing bespoke solutions to meet every requirement and scenario.

CQC's DCC patrol pack systems are equally unique in their design features and capability. Each new design is built to ensure every user's need or requirement is met, ensuring modularity, integration and weight saving is at the heart of every system we design. Systems such as the Raptor series of patrol packs are built from the ground up and tailored to meet exact needs and requirements at every level.

CQC's systems offer greater capability and flexibility by utilising simple but effective features such as:

- Quick removal support padding – Enhancing fit and comfort when worn with body armour systems
- Quick release buckles – Providing greater capability and ease of use
- Hydration & manpack radio integration – Designed for flexibility across all areas of combat and peace time operations
- Adjustable & modular shoulder straps to accommodate additional load and wearers' different sizes and shapes – Modularity means packs can sit where you need them to, not where they want to
- Integrated technology – Designing back-up power management systems within the DCC Pack for greater reliability and less burden

Specifications & Key Features:-

- 20 - 120 Litre capacity
- Hydration Carriage
- Manpack Patrol communication carriage
- Waterproof personal storage compartments
- Modular Harnesses & belt systems - Changeable and adjustable
- Modular padding and protection capability
- Bespoke internal personal and mission specific storage
- Integrated waterproofing
- Integrated protection
- Quick Release
