

Flood Mitigation Solutions

Self-priming petrol driven pump

- Suitable for temporary deployment
- Can be used when power is down
- Portable
- Rigid suction hose, foot valves and strainers available

Submersible electrical motor driven pump

- Suitable for temporary deployment
- Requires electrical supply
- Portable
- Discharge hose and quick couplers available

Generators

- Back-up power supply
- Suitable for temporary or permanent installation
- Can be configured to auto start on mains failure

Prefabricated Lifting Stations

- Suitable for permanent installation
- Requires installation of tank in ground, plumbing of discharge pipework and an electrical supply
- Reliable, automatic operation
- Twin pump options for duty / standby

Puddle Sucker electrical motor driven pump

- Suitable for temporary deployment on a flat surface
- Starts at 5mm water depth and pumps down to 2mm
- Requires electrical supply
- Portable
- Discharge hose and quick couplers available

Non Return Valves

- The unit closes the pipeline automatically when backflow occurs.
- The non return valve is a simple and effective way to eliminate flood risk by backflow through drainage pipes.
