

Field Bergens & Patrol Packs

Load carriage is the cornerstone of CQC's approach to Soldier Systems, ensuring that users can operate as effectively as possible without compromising on protection and reliability.

CQC have developed a strong reputation as a world leader in the design and manufacture of high quality and modular field bergens and DCC Patrol Packs.

Our designs have been in service across major tier one and tier two militaries around the world for over 20 years, and have earned a deserved reputation for innovation, design and quality.

Field bergens & DCC Packs range from 120L large carriage systems to smaller more specific 20L systems. All of our systems are designed to be modular in their approach and to support a wide and diverse range of requirements and capability.

Adequate internal mission specific and personal storage space is critical for today's modern users. CQC's design team have developed a number of unique and innovative design features into our field bergens & DCC Packs for a wide and diverse range of end users. These can range from SOF or dismounted infantry roles to vehicle and armoured crews. Each have very unique requirements while all striving to have a common system approach to maximise integration and capability.

CQC's vastly experienced design team and rapid prototyping department are uniquely experienced in developing bespoke solutions to meet every requirement and scenario.

CQC's DCC patrol pack systems are equally unique in their design features and capability. Each new design is built to ensure every user's need or requirement is met, ensuring modularity, integration and weight saving is at the heart of every system we design. Systems such as the Rhino series of patrol packs are built from the ground up and tailored to meet exact needs and requirements at every level.

Field Bergens & Patrol Packs

CQC's systems offer greater capability and flexibility by utilising simple but effective features such as:

- Quick removal support padding – Enhancing fit and comfort when worn with body armour systems
- Quick release buckles – Providing greater capability and ease of use
- Hydration & manpack radio integration – Designed for flexibility across all areas of combat and peace time operations
- Adjustable & modular shoulder straps to accommodate additional load and wearers' different sizes and shapes – Modularity means packs can sit where you need them to, not where they want to
- Integrated technology – Designing back-up power management systems within the DCC Pack for greater reliability and less burden

Specifications & Key Features:-

- 20 - 120 Litre capacity
- Hydration Carriage
- Manpack Patrol communication carriage
- Waterproof personal storage compartments
- Modular Harnesses & belt systems - Changeable and adjustable
- Modular padding and protection capability
- Bespoke internal personal and mission specific storage
- Integrated waterproofing
- Integrated protection
- Quick release
