Introducing InterView 4.5

InterView is a world-class transportation management system designed by InterChez logistics experts and used by professionals in a variety of industries nationwide.

A decade of constant development has resulted in a complete set of tools for logistics professionals to accurately rate and track shipments to maintain complete supply chain visibility for its users. With the development of InterView 4.5, it is now more accurate and reliable than ever before. InterView has been reworked from the inside out to include more useful tools, an improved interface and a faster, more secure infrastructure.

InterView 4.5 features a redesigned user interface that is responsive to any screen

size and is accessible from any web enabled device. With the introduction of the InterView Dashboard that features a variety of widgetized functionality, users can instantly view important shipment information from anywhere at any time.

Under the hood, InterView 4.5 features industry standard services for accurate mileage calculation and LTL rating. Using the latest web technology, InterView's improved rating engine is faster and more accurate.

InterView 4.5 is designed by logistics experts to serve the needs of logistics industry. A combination of an intuitive user interface, accuracy and speed proves InterView 4.5 to be a world-class transportation management system.

SHIPMENT SEARCH: SIMPLIFIED SEARCHING FOR ACCURATE RESULTS

The screenshot shows the InterChez web application's shipment search interface. At the top, there is a navigation menu with the InterChez logo and various menu items: Shipments, Integration, Add, Search, Bid Board, Administration, and Security. A search bar on the right contains the text 'Shipment #' and a user profile icon labeled 'SampleUser'. Below the navigation is a breadcrumb trail: 'InverView / Shipments / Search'. The main area is titled 'Filter' and contains several search criteria sections: 'ID', 'Pro#', 'BOL#', 'Entry Creator', 'Cust Ref# / AETC', 'PO#', 'Invoice#', 'Customer', 'Carrier', 'Bill To', 'Origin', and 'Destination'. Each section has a text input field and a search icon. At the bottom, there are three date pickers: 'Shipped Dates' (Begin and End), 'Received Dates' (Begin and End), and 'Status' (Track & Trace Status and Review Status). A 'Row Limit' label is visible at the bottom left of the interface.

SHIPMENT SEARCH

InterView 4.5 is designed with an emphasis on simplicity and visibility. The simplified shipment search allows the user to simply enter vital shipment information for quicker searching.

A more detailed search is also available in Shipments > Advanced search. Advanced search features the ability to export search results.

ITEMS

Finally, add all of the types of items that will be picked up along with their dimensions and details.

REVIEW

Once everything is entered, review the information and add the shipment.

EDI: ELECTRONIC DATA TO ACCELERATE AND AUTOMATE ADDING SHIPMENTS

EDI

InterView 4.5 offers multiple methods to integrate with customer and carrier systems. Shipment requests can be received electronically from other ERPs. Once received, a user can view the request and process it.

EDI: 204

EDI 204 shipment tender requests can be uploaded to the EDI interface to be viewed and turned into a shipment. The user can then book the shipment and process it normally.

XML ORDERS

XML orders is a web service that allows other systems to directly tender shipment requests to InterView. These shipments can be reviewed and then added as a shipment automatically.

SHIPMENT EDIT: ADDED FEATURES AND FUNCTIONALITY

Status Review <i>Not available</i>	Status Rate Confirmation Customer <i>Unavailable</i>	Status Rate Confirmation <i>Unavailable</i>

SHIPMENT SUMMARY

Users can now view top level information about the shipment in the new shipment summary page. This page is updated every time someone updates any shipment information. Ideally, a customer could view this page and know everything they need to know about the shipment.

 This page is a new addition to the shipment edit process. It is possible that this page will contain more shipment data in the future.

SHIPMENT EDIT: ADDED FEATURES AND FUNCTIONALITY

SHIPMENT DETAIL

The shipment detail is very similar to the previous version. There is a new section labeled "Shipment Actions" that houses most of the action items for this shipment. Also, all items on the shipment now appear at the bottom of the page below the stop information.

FILES AND LOGS

InterView 4.5 features an enhanced log for a more accurate look at the history of a shipment. Accessing any shipment files is the same, but with a new button.

Most shipment editing errors can be identified in the shipment log. The new log shows a more complete log entry for every action in a shipment.

In Closing

InterView 4.5 is designed and developed by InterChez logistics experts to simplify complex logistics operations by providing complete shipment visibility.

A decade of improvement has resulted in a complete transportation management system that is capable of handling logistics operations of any size. From quoting, booking, tracking and reporting – InterView 4.5 is a complete 3PL solution that is continuously improving. Future releases of InterView will rely on the input and needs of industry experts.

Creative user contributions have been a driving force in the development of

InterView 4.5. Suggestions ranging from page layout to improving rating functions have been heard, designed and developed. It is important to drive user input as InterView continues to grow. It is encouraged that all users communicate any issues or ideas for improvements with the development team. Every idea is documented and considered.

In its lifetime, InterView is responsible for the rating, tracking and reporting of over 194,000 shipments. The true power of InterView does not only come from the technology, but from the contributions of the network of users who utilize InterView every day. We invite you to contribute to the future development of InterView.
