

## GUIDE TO SHOT (Steel abrasive)

Shot (steel abrasive) is the medium used in enclosed action shotblasters, which creates the profile when impacting the surface & can be mixed & matched to improve cleaning, profiling & removal performance of the process.

### **330 Grade 0.85 – 1.2mm**

Use to lightly texture, profile & clean power floated concrete stone and asphalt.

### **390 Grade 1.0 – 1.4mm**

Use for a slightly more aggressive cleaning, texturing and removal performance.

### **460 Grade 1.2 – 1.7mm**

Use to; remove concrete laitance & paint, re-texture asphalt, remove waterproofing systems, contaminants & thin levelling systems, clean stone, tiles & screeds & prepare steel to SA2.5 / SA3 standard.

### **550 Grade 1.4 – 2.0mm**

Use for a more aggressive application on the same material as 460 grade.
