Manage enterprise-wide post-breach, HR and compliance investigations with a single solution

From multiple office locations to massive employee pools and remote workers, AD Enterprise provides deep visibility into your organization's data, to uncover employee wrongdoing and facilitate regulatory and legal requirements.

Investigating a data breach? Suspect employee misconduct? Hunting for potential IT policy violations? AD Enterprise helps you conduct focused forensic investigations quickly, remotely and discreetly, without alerting employees or interrupting business operations.

Conduct forensically sound, remote, covert internal investigations faster than ever before

- **Gain visibility across endpoints.** With AD Enterprise, get visibility into all activity on your endpoints, network shares and peripheral devices. Preview live data at the endpoint, then filter on any attributes and choose to retrieve only the data that matters to your investigation.

- **Uncover "hidden" evidence.** AD Enterprise can help with restoration of partially deleted data, fragmented files, hidden processes and volatile data from a wide array of file types and data sources. Visual memory analysis tools help you reach deeper into the endpoint to investigate unknown activity within temporary storage faster, and find traces of malware that might otherwise go unnoticed.

- **Analyze incidents.** Proactively or reactively scan thousands of endpoints to identify rogue processes (even those that are hidden) and anomalous activity. Determine if and when locally installed antivirus software—such as Windows® Defender or McAfee®—detected, deleted or

quarantined files at the endpoint. Identify which systems, devices and applications have been affected and prioritize remediation ... all from a centralized location.

- **Investigate discreetly.** Perform investigations covertly to avoid alerting employees to the investigation and prevent disruption of business operations.

- **Ensure data integrity.** With forensically sound collection capabilities and the AccessData® single, secure back-end database reducing data movement and potential data spoliation, you can be confident evidence is collected and preserved in a legally defensible manner.

- **Collaborate using fewer resources.** Built-in tasking collaboration tools help fellow investigators communicate across departments to share notes; keep the team informed; create, assign and prioritize tasks; or escalate incidents for deeper investigation.

Dispersed data? No problem!

Many organizations have complex structures for data access and storage. AD Enterprise can preview and acquire data from remote endpoints, across all geographically dispersed offices, eliminating the need and cost associated with going outside your organization for help with digital forensics.

And AD Enterprise supports forensic examination on a broad range of operating systems including Windows®, Linux®, Mac®, UNIX®, Android™, iOS® and BlackBerry®.

Support & Training

Our goal is to provide superior technical support, product training and development to ensure users achieve the most value from their technology investment.

Support options can be found at
marketing.accessdata.com/Support and include:

· Telephone technical support
· A knowledge base portal containing
  solutions to common questions
· A discussion forum where users can post questions
  and find answers
· User guides, quick-reference guides and more!

Training options can be found at
marketing.accessdata.com/ADTraining and combine
a unique teaching methodology with state-of-the-art technology. Options include in-person classroom, live online, or via our Learning Management System (LMS). For access to LMS visit marketing.accessdata.com/LMStraining

When the investigation moves to litigation, use AD eDiscovery to manage the complete e-discovery workflow.

A single, fully-integrated platform for forensically sound enterprise-wide preservation/lit hold, search, collection, processing, data assessment and complete legal review, AD eDiscovery gives teams a repeatable, defensible process for managing e-discovery that will hold up in court. Collect data, then apply a wide array of complex visualization, data analytics and document review tools to quickly identify and produce key documents as part of e-discovery.

And because all AccessData solutions share a single, integrated back-end database, you don't have to move your data, eliminating risk of data spoliation and reducing time and costs.

If you're looking for an end-to-end tool to address your e-discovery needs, learn more about AD eDiscovery at
