

We are glad to introduce ourselves as a Digital X-Ray Inspection Systems manufacturer. Based out of the Innovative & Industrious city of Coimbatore, we are serving the Automobile Components Manufacturers by offering **world class and fully indigenous Digital X-Ray Systems for inspection.**

Identifying aluminium casting defects such as **blow holes, pores, cold shut and shrinkage** has traditionally been done using sampling methods and Third Party X-Ray Inspection. This takes a lot of time and is costly. This increases the inventory and reduces the defect prevention capability of Aluminium Casting Companies.

While Third Party Inspection services cannot be avoided for meeting customer requirements, an **in-house Digital X-Ray Inspection system will help to:**

- 1. Improve productivity (by reducing time for X-ray Report – 0.2 seconds is our typical time required)**
- 2. Improve Defect Prevention (by fine-tuning pressure die casting machine setting)**
- 3. Reduce Inventory and**
- 4. In 100% inspection of manufactured components.**

Peace of Mind and 100% Customer Satisfaction, what else can you ask for from your business? Call /mail us for a detailed requirement study for your company. We will provide a customized solution for your needs.

Best regards,

Karthikeyan Jawahar
