Version 6.0 Fixed Licence Installation Instructions for Scientific Word / Scientific WorkPlace / Scientific Notebook

1. System requirements are as in our [April 2015 mailing](#) (Item 1)
2. Re-boot and make sure you are signed in to your computer as an Administrator
3. Download the program file [here](#). To install:
 - **Windows:** Browse to the directory containing the download file: right-click the file and select Run as Administrator to begin the installation. You may need to turn Windows Defender SmartScreen off (Start – Settings – Update & Security – Windows Security – App & browser control – Check apps and files – Off) or, if it's set to Warn (our recommendation) then click More Info – Run Anyway at the dialog
 - **Mac:** Click to open the .dmg file you downloaded, and Ctrl+Click to open the installer which starts with swp/sw/snb (as appropriate). Enter your Mac password if requested

Please note: If you get error messages during the installation (like [this](#) and [this](#)) please install TeXLive manually following the instructions [here](#)
4. The downloads for Scientific Word / Scientific WorkPlace separate installers for the main program and TeX Live; the installers may be run separately if required. Accept the **default answer** to the installation questions and let the program installer run whichever additional modules it requires. Accept the Licence Agreement
5. For Scientific Word/WorkPlace, the installation will take **up to 30 minutes** (the installation program installs TeX Live 2019); you'll know it hasn't crashed, because you'll see the names of different files being installed
6. After installing, open Scientific Word/WorkPlace and Activate the program: click Help – Activate and **type** (not copy and paste) your serial number and Email address (re-Activating is not necessary after updating)
7. Exit and re-boot
8. Your licence file [license.lic](#) belongs in the Profile folder of your program installation – it will be **of the form** c:\Users\[Name]\AppData\Roaming\SW[P]\Profiles\[cht11msu].default\license.lic (Windows) or ~/Library/Application Support/SW[P]/Profiles/[pu0nd1yk].default/license.lic (Mac)
 - For **home use** systems attached to a campus-wide Site Licence, your installation will not work until your licence information has been forwarded to you by Email from your Site Licence Administrator. Copy the entire licence Email (at least the 3 lines of code, blank line, your serial number **and blank line**) to the clipboard, close Scientific Word/WorkPlace/Notebook, and re-open the program; this creates your licence file. To ensure the Site Licence Administrator can confirm your status/eligibility, please use your official company/University Email address when Activating in Step 6
 - For **standalone** systems, your licence file will be created automatically by Activating

To ensure you are correctly Activated, check you get the [gold seal](#) from Help – License Information
9. In tracking down any problems with compiling and showing the PDF, it helps to examine the log file. This, together with the PDF (if created), will be in the \Documents\SW[P]Docs\[filename].sci\tex\ folder
10. We recommend watching our videos on our v6.0 [New Features](#) and [Demonstration Videos](#) pages. The manuals are available for download [here](#)
