

# ***ENDCAPE*** **GENERATORS**

Endcape is an independently owned family business, with a strong reputation in the supply of power generation equipment.

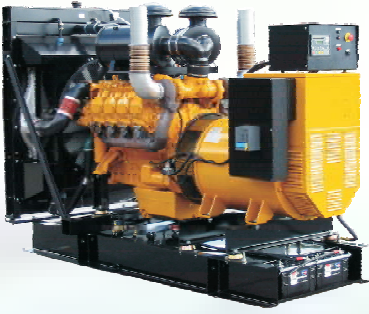

Established in 1984, we have over 30 years experience in the design, manufacture, and export of generators and associated products to over 70 countries world wide.

Endcape generators are regularly supplied into the following markets & installations

- Hospitals
- Airports
- Banks & Financial Institutions
- Data Centres
- Commercial Buildings
- Factories
- Residential Complex
- Government Buildings
- Palaces
- Off Grid
- Rental Fleets
- Militaries, Naval & Land Based
- Telecommunications Sector
- Marine Generators
- Oil & Gas Industry

Every Endcape generator is manufactured in the UK by our team of experienced staff using only British and European supplied components.

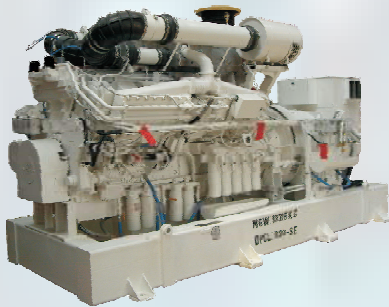

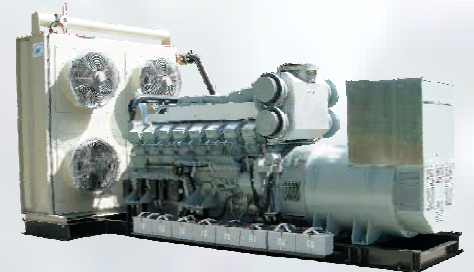

### Industrial

Endcape's range of industrial generators have electrical outputs from 5kVA to 4000kVA. Available as both 50Hz & 60Hz machines, and voltages up to 13.8kV, they are suited to applications where cost effective prime power is required. Markets include offices, factories and manufacturing.

### Backup & Standby

For critical installations that require emergency backup power, the Endcape range of standby generators have been designed to offer the highest reliability. Automatic control systems ensure that the power is restored in the shortest possible time. Typical installations include hospitals, airports, and data centres.

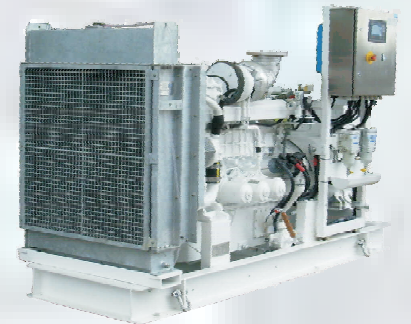

### Offshore, Oil & Gas

Designed, built and tested to the toughest specifications, Endcape offshore equipment is in service in the oil & gas industry around the world. In applications including FPSO, oil exploration, and decommissioning of platforms, Endcape's equipment incorporate ATEX safety features, and safety requirements for offshore operation.

### Marine

Suited to the corrosive environments associated with marine applications, Endcape marine generators are built and tested to society standards, including Lloyds, DNV, BV, GL, KR and ABS. Supplied to navies, exploration vessels, and other working boats, Endcape marine equipment is relied on daily.

### Containerised

For installations where an engine room is unavailable, Endcape's container generators can be dropped on-site to provide prime or standby power as needed. Available in capacities up to 3000kVA, and sound levels down to 65dB(A)@1m.

### Silent & Low Noise

Endcape's soundproof generators offer a compact low noise power solution. Using the latest acoustic materials, and innovative designs, our super silent units are available in capacities up to 900kVA.

## Special Projects

At Endcape we appreciate that sometimes a standard generator won't fit the application. As an original equipment manufacturer we are able to tailor our generators to suit the customer's requirements.

Working closely with our customers, and their consultants, we can engineer our products to offer the best solution and fit, for the installation.

Our bespoke generators are built to incorporate special features requested by the end user. From custom fuel systems, ultra low noise levels, and tailored control and monitoring panels, through to projects where power is a useful by-products, and the main requirement is heat or mechanical power.

Endcape's experience has helped thousands of customers around the world.

Buying from the manufacturer, rather than a reseller of other manufacturers products, ensures that you get the right product for your needs.

## Environmental Policy

Endcape adopts a responsible attitude towards the protection of the environment.

The company strives to meet the requirements of all applicable environmental laws and regulations.

Endcape minimises energy use, and seeks to reduce, re-use and recycle waste where possible, and for proper disposal of waste

Endcape's are located in the historic market town of Pickering, to the North East of York.

Approximately 300km North of London. Pickering is 1hr drive from Leeds/Bradford airport, and easily accessible by rail from London, Manchester & Edinburgh through York station, which is only 50km away.

Endcape Ltd, Interpower House, Pickering, North Yorkshire YO18 7JA ENGLAND
