

# SYMMETRY™ PROFESSIONAL V7.0

The Symmetry Professional Security Management Software is designed to provide powerful integrated access control and security management solutions for most business applications.

The Symmetry Professional software is used to actively manage the system and holds the details of each authorized individual with access into a specific building. The powerful, yet user-friendly Symmetry Professional interface enables users to issue access control cards and determine access rights by day of the week and time of day.

Symmetry Professional also includes alarm management software, graphical maps, reports, a free visitor management system and many other powerful features. In addition, a badge designer tool is included providing users with the ability to design and print identity badges.

Symmetry Professional is for medium to large organizations requiring a client/server security management system that can use existing LAN/WAN networks.

Symmetry Professional includes database partitioning, which allows multiple companies to share the same system, and provides a cost-effective solution for buildings occupied by more than one organization.

Symmetry Professional provides a comprehensive range of standard features, including alarm monitoring and routing, visitor management, badging and map interfaces, with additional options available for specialist requirements. Client access is also available using a Web browser using the optional Web Access module.

Each client PC runs Symmetry Professional, the application that allows you to configure, monitor and control the security management system. The software lets you set up card holders, assign access rights, produce reports, monitor alarm conditions and control hardware such as cameras and readers.

The ability to customize the system to show only those features that your users require ensures that operator training is kept to a minimum and allows users who have different requirements to be presented with different features.

Symmetry Professional has been designed to provide the most efficient system management with extensive and flexible reporting capabilities. The wide range of standard features ensures that you can obtain the full benefits from your investment.

## KEY FEATURES

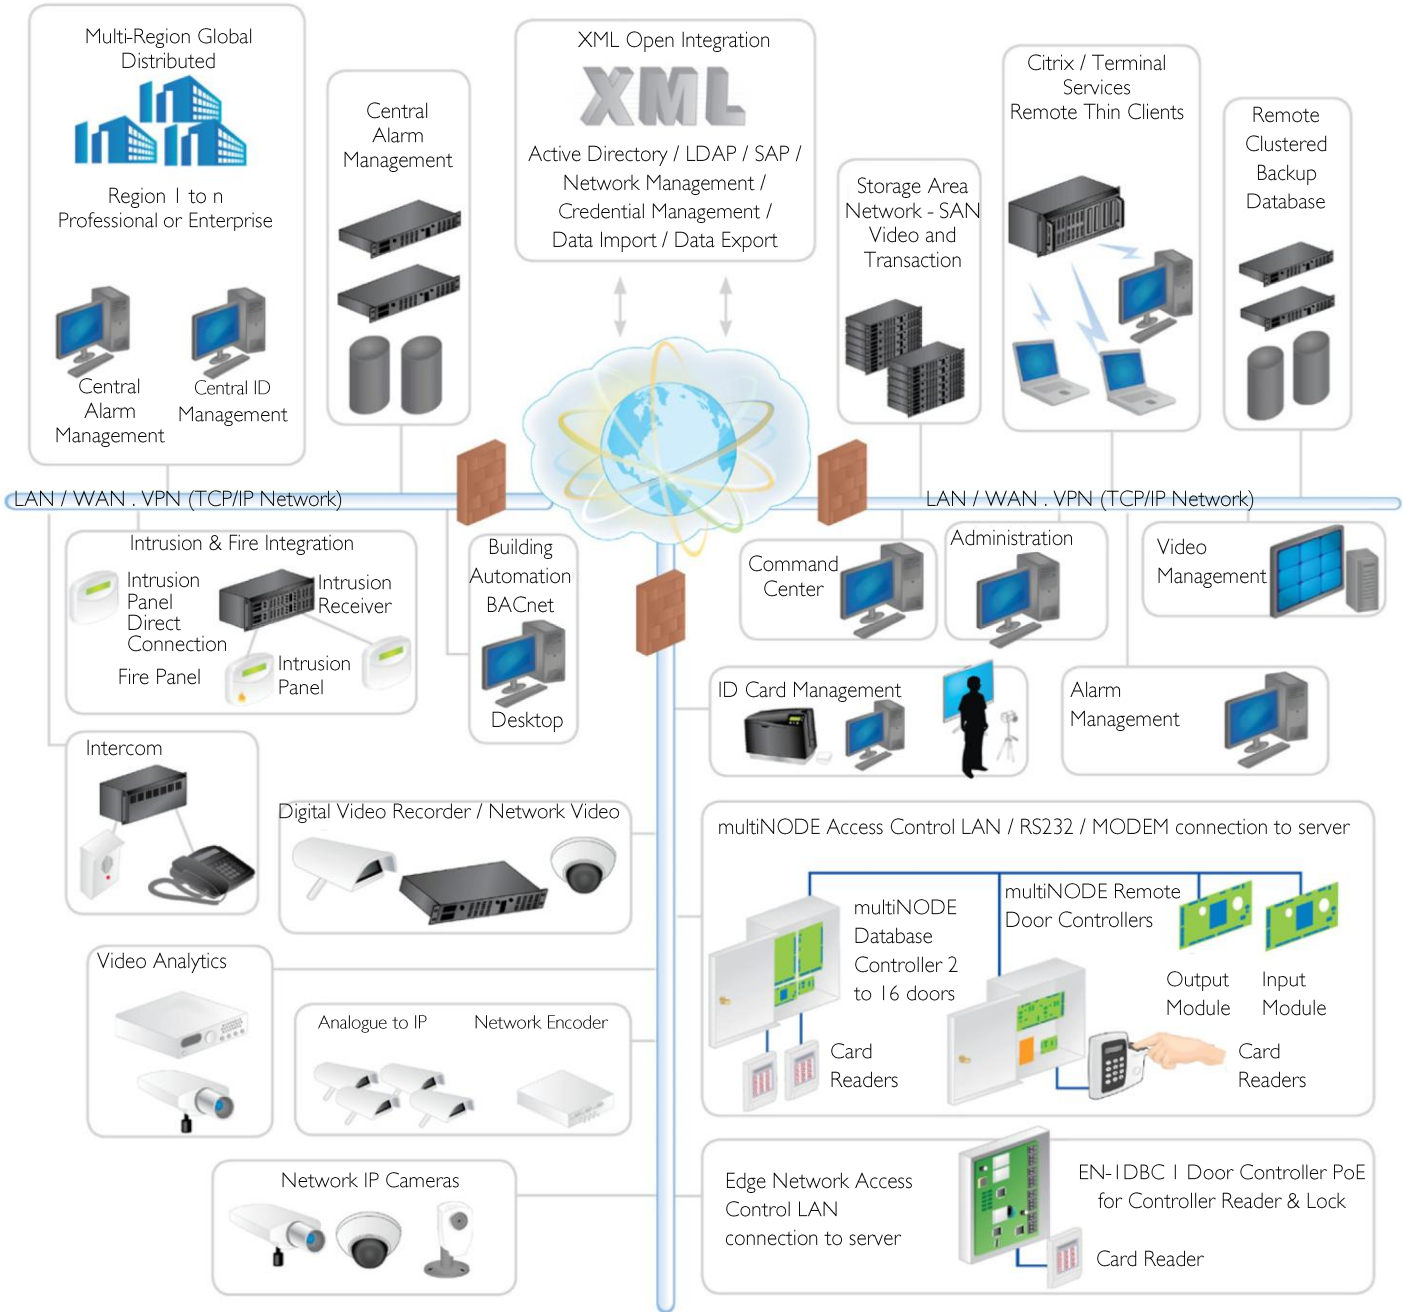

- Competitively priced powerful Access Control and Security Management Solution for most business applications
- Easy card issuing administration using bulk amendment
- The power you need to control all your security needs
- Up to 256 card readers and nine client computers
- Unrestricted card holder capacity
- Video Badging and Visitor Management software as standard
- Employs the very latest thinking in user interface design
- Supplied with Microsoft® SQL Express Database
- Comprehensive alarm-handling features
- Optional modules available to control video cameras, intercom systems and intrusion alarm panels
- Open architecture with various integration options
- Single sign-on option for authentication to Microsoft Active Directory

## OPTIONAL SOFTWARE MODULES

Software packages offer a range of fully-integrated additional features designed to enhance the system and provide higher levels of flexibility and integration. Optional features include:

- Active Directory single sign-on
- Building Control Module
- Data Connect Import/Export
- Guard Patrol Management
- Intercom Management
- Intrusion Management
- Muster Management (Safety Roll Call)
- Video Management
- Threat Level Manager
- Web Access
- Workflow Designer
- XML Open Integration Module
