

# CYPAD™

## Identification & Marking Emitters

**CyPad™** versatile and self-adhering beacons emit wavelengths of light that are visible in red or green for marking egress routes, identifying staff, and improving command and control during limited visibility.

Rectangular and flat, **CyPad™ 10-Hour Visible** weigh less than a traditional 6" SnapLight® lightstick and take up less space but has the same surface area. Easily marked with permanent pens for visible or covert messaging. The hook and hole devices enable you to hang the CyPad from wires or microfilament.

Designed to minimize accidental activation, **CyPad™ Visible** can be kept in pockets for easy access and deployment.

- Waterproof, Non-toxic
- Lightweight, Saves Space
- Self-adhesive backing
- Marks easily with permanent marker for visible or covert messaging
- Designed to minimize accidental activation
- Ideal for marking personnel, targets, equipment, hazards and room clearing
- Environmentally-Friendly Formulation
- Made in the U.S.A.
