TILES WITH ALKORPLAN

TRANSFORMING POOLS FOR THE SWIMMING POOL INDUSTRY SINCE 1993 TO THE HIGHEST OF STANDARDS

TOUCH "FEEL THE DIFFERENCE"

ELEGANCE

RELAX

AUTHENTIC

The **Touch** range is manufactured in extremely tough 2.00mm material and is the only pool lining to have a natural looking texture incorporated into it. This unique texture means that the Touch material has a tactile element which is utterly unique.

The patterns are designed to give a natural feel and appearance, giving the sensation of swimming in a natural pool or lagoon whilst never compromising on the high protection aspect expected from all Alkorplan products. The multiple layers of acrylic varnish ensure a finish which will look fantastic for years and years, withstanding all kinds of punishment endured in a swimming pool environment.

The 3D embossed **Touch** range is presented in three different patterns; Touch Authentic, Touch Relax and Touch Elegance all designed to give a beautiful natural looking swimming pool.

THE ULTIMATE IN FLEXIBILITY

When it comes to negotiating tight corners, complicated shapes and unusual sizes, the Alkorplan pool lining system by Aquaflex offers the ultimate in flexibility.

STRENGTH AND VERSATILITY

A lining system is ideal for both commercial and residential pools - and comes into its own particularly on renovating and refurbishment of sites.

Alkorplan's main selling point is its exceptional strength. The material which incorporates a polyester reinforced mesh is 1.5mm thick which enables it to withstand intensive use and severe knock from even the most enthusiastic swimmers. It also has a special formula that includes a UV stabilising treatment which can withstand exposure to all extremes of weather, retaining its properties year after year.

Guaranteed for ten years, with a life expectancy nearer 15 to 20 years, Aquaflex's Alkorplan pool lining system can be used on new or existing constructions including concrete, cement render, brick or block, steel or aluminium, timber or fibreglass builds. Alkorplan is ready for installation in any swimming pool irrespective of shape; rectangle, oval, kidney, circular, trapezoidal, completely irregular, with or without lined steps etc.

Alkorplan lined swimming pools can be comfortably run at temperatures up to 33°C (91°F) without any detrimental effect on the expected life of the lining. Even at temperatures up to 35°C (95°F) the lining will give many years of service and is still covered by a more limited 5 year guarantee.

See the Aquaflex website for more details - www.aquaflex.co.uk

THE METHOD

Before the Aquaflex team is called in, the shell of the pool would be prepared or built by the main pool contractors using standard liner fittings: skimmers, inlets, lights, sumps and linerlock.

The Aquaflex team start by gluing felt underlay to the base and sides of the pool. Generally they would then weld a bead to the top of the sidewalls. There is an option for a different type of fixing whereby PVC coated metal is fixed to the pool and also underneath the coping stones. In this instance the liner is then welded directly onto the metal profile. This system is particularly useful when renovating old pools especially when it is important not to disturb the coping stones.

The sidewall is then clipped into the linerlock (or welded to the metal profile) and cut to the correct depth. The base of the pool can now be lined and the sidewalls welded to the base. The material is overlapped by 50mm and welded by hot air gun.

All welds are scribe-tested and sealed with liquid PVC mastic.

All our in-house Aquaflex teams are qualified Renolit approved installers. We never use sub-contractors for Site Lining.

OPTIONS

There are several colour and pattern options available as well as slip resistant step lining.

There is also an option to have lane markings incorporated into the lining for competition swimming.

AQUAFLEX

The UK's leading Liner specialists

This perfect blend of Alkorplan Lining and Ceramics offers a unique and beautiful combination transforming any pool giving it a sophisticated and elegant look.

The installation of Aquaflex **Synergy** is similar to that of the normal Alkorplan flexible lining system but with the additional installation of a 300mm heavy weight PVC coated metal profile around the top perimeter of the pool.

Once the pool has been lined, using a special adhesive, ceramic tiles are laid onto the PVC coated material. The tiles, of your choice, are then grouted in the normal way, achieving a beautiful tiled finish at the waterline of the pool.

Our large range of Alkorplan liner materials can be married with any complimentary ceramic tiles.

So create something beautiful and request a quote now for the Aquaflex **Synergy**, simplicity at it's best.
