

KALIBURN

KALIBURN ProLine 2150

150 amp High Current Density Plasma Cutting System

The ProLine 2150 by KALIBURN is a 150 amp precision high current density plasma cutting system that combines precise, square, and virtually dross-free cuts with excellent speeds on gauge thick metals to 1" (25.0mm) thick, and it has a maximum capacity to 1 ½" (38.0mm).

Uncompromising cut quality, combined with excellent processing speed and the lowest initial investment, equates to the best value in precision high current density plasma. Even competitors' systems costing many thousands of dollars more cannot offer better cut quality or match the ProLine 2150's productivity.

With the ProLine 2150's manual controls, you can tailor all of the cutting parameters to your specifications. Optionally, our patented INOVA torch height control system can be built into the ProLine 2150, greatly simplifying installation.

If you need to cut gauge thicknesses through 1" (25.0mm) metals with square, clean, virtually dross-free edges while closely monitoring initial costs, the ProLine 2150 by KALIBURN is the machine of choice.

Mild Steel Production Capacity	Max. Thickness (Edge Start, with dross)		
1" (25.0mm)	1-1/2" (38.0mm)		

The ProLine 2150 is one of the three systems in the KALIBURN "ProLine" family. The ProLine 2200 and ProLine 2260 offer identical cut quality but each has a unique amperage range and corresponding thickness capacity. KALIBURN also offers four fully automated machines in the "Spirit" family; Spirit150a, Spirit200a, Spirit275a and Spirit400a. These machines are our most advanced systems and provide cut quality identical to the ProLine systems. With Spirit systems, all process parameters are set automatically for ease of operation.

3-YEAR POWER SUPPLY WARRANTY

Engineered for life

FEATURES

- High current density cuts are virtually dross free and square (2° or less bevel)
- R and C approval available
- 400 ampere IGBT chopper transistor for high reliability
- Fast switch transferred arc for extended nozzle life
- Advanced technology, high efficiency chopper-stabilized current output
- 70 GPH recirculating torch coolant system
- Current overshoot reduction circuitry for longer electrode and nozzle life
- Very low transferred arc current sensing for higher starting height and longer nozzle shield life
- Extends electrode life through a patented process
- Marking capability
- Optional INOVA's control electronics are housed in the manual gas console atop the power supply

^{*} Requires edge start or moving pierce

OPTIONAL

The ProLine 2150 is available with the industry standard INOVA Torch Height Control system. In this configuration the control electronics are housed in the manual gas console atop the power supply. Also, a pneumatic safety switch can be added to protect the torch from collision damage.
