FITESA AWARDED 2019 IDEA ACHIEVEMENT AWARD – ROLL GOODS CATEGORY  
*Fitesa 100% Biobase PLA Soft*

MIAMI BEACH, FL, USA (March 27, 2019) – Fitesa is the winner of the 2019 IDEA Achievement Award in the roll goods category for its 100% BioBase PLA Soft.

Fitesa 100% BioBase PLA Soft is a spunbond nonwoven made from 100% renewable, compostable resin, with soft touch - superior to standard PP spunbond materials and other BioBase spunbond products.

PLA is a renewable source resin produced from the lactic acid extracted from plants' glucose. Fitesa applies state-of-the art technology to process this material into a spunbond fabric. Its monopolymer composition makes recycling easier (compared to bicomponent structures), and a proprietary soft bond pattern makes Fitesa 100% BioBase PLA Soft the best sustainable solution in the market.

Fitesa is the world's second largest merchant spunmelt nonwoven manufacturer. Fitesa also produces carded, airlaid and specialty fabrics, including elastic laminates and composites, embossed and perforated nonwovens.
