

The New CESAB P214

1.4 tonne
Powered Pallet Truck

Advance Information

CESAB

Proven reliability

The new CESAB P214 powered pallet truck is ideal in low intensity applications in warehouses and stores. Manufactured using the world renowned TPS¹ that helps to reduce environmental impact and consistently ensures high quality standards.

Excellent manoeuvrability

The combination of compact size (the truck is only 481 mm long excluding forks), rounded corner chassis and an ergonomic tiller design make the CESAB P214 exceptionally manoeuvrable in even the tightest spaces. The power unit slopes towards the forks for improved operator visibility during ground level handling operations.

Power and control

The P214's CESAB Drive Control system uses contactless switches, so there are no mechanical contacts to wear out. CAN-bus wiring further enhances reliability and ensures smooth power delivery across the full range of operating speeds, a key benefit when operating in confined spaces.

Truck Specifications

	CESAB P214
Rated capacity (kg)	1400
Truck length excl. forks, L2 (mm)	481
Truck width (mm)	726
Fork length (mm)	810-1520
Travel speed with/without load (km/h)	6
Battery capacity 24V (Ah)	150

The figures may vary depending on the specification and condition of the forklift as well as the nature and condition of the operating area.
