Microsoft System Centre Operations Manager

Operations Management

ICT departments are under increasing pressure to deliver higher levels of benefit to the business whilst demonstrating value for money. By automating the management and monitoring of systems and services, ICT departments can do more with fewer resources, better manage the complexity of their environment and achieve the agile necessary to deliver higher business profit.

Microsoft System Centre Operations Manager addresses this very requirement and provides an easy-to-use, software-based solution that automatically monitors servers, applications and clients to provide a comprehensive view of the health of an organisation's ICT infrastructure.

End-to-End Service Management

System Centre Operations Manager provides end-to-end service management that is easy to customise and extend to help improve service levels across your IT environment.

Operations Manager allows an administrator to graphically define the components that make up a service. Once the service model is defined, services are managed like any other device. Events can be monitored, performance can be tracked, and overall health can be viewed and reported on.

Increased Efficiency and Control

System Centre Operations Manager automates routine, redundant tasks and provides intelligent reporting and monitoring to help increase efficiency and enable greater control of your IT environment.

Best of Breed for Windows

System Centre Operations Manager provides administrators with direct access to in-built detailed product knowledge and event-based trouble shooting steps from the Microsoft server, client and application development and support teams.

BDS Solutions employ a dedicated team of qualified technical consultants who specialise in helping customers realise their maximum business benefits by planning and deploying SCOM in a way that fits their particular business needs.
