Presents

PATHFLAG

PATHFLAG

This unique interchangeable carrier system has been designed to overcome a major problem in directional escape routes and general signing on industrial floor gratings and walkways

The Problem.

Metal and GRP floor gratings are the most commonly used materials in industrial flooring, yet no signage has been developed to work in conjunction with it. On many industrial, chemical, power generation and process sites there is often limited space to highlight escape routes and to locate or sign essential safety information.

The Solution.

With a class 1 fire rating and manufactured from tough, shock resistant, hard wearing ABS plastic the unique patented **PATHFLAG** signage carrier system is the most cost effective solution to this problem.

PATHFLAG is unrivalled in its design and construction. It has been specifically created to fit onto grated flooring secured with a toggle fixing. These sign units placed at regular intervals on walkways and staircases offer reassurance and orientation points for operatives working in or evacuating these areas.

Flexibility.

The **PATHFLAG** holder is designed to hold a rigid sign insert. These are supplied in Class B Photoluminescent material for maximum conspicuity. The internal design of the sign unit allows the holder to be cable tied to fencing or hand rails. It is pre-formed with 5mm Ø holes, which means the unit can be screwed into timber and it also comes with a magnetic fixing to the rear. The outer can be moulded in a variety of colours (minimum quantity 1000). We can also produce specialist inserts to your design outside of our standard range.

Step 1

Purchase Base Unit
