Fully Managed Solution

Anti-Spam Firewall provides layers of protection which can be fully configured, controlled, and tailored to your requirements, ensuring email on your server is secure.

Real Time Protection

The Barracuda Email Security Gateway (BESG) works 24/7, monitoring spam and virus threats around the world. When threats are detected, the BESG utilises real time protection to mitigate these threats as they emerge.

Malware and Phishing Protection

Using an advanced set of technologies and a multilayered approach to provide the most comprehensive email protection available against spam, malware, viruses, spoofing, phishing and spyware attacks.

Full Spam Filtering

All incoming email must pass-through all defence layers of the BESG before any of it can reach the intended recipients. Emails are checked for new and familiar spammer attacks, viruses, and customised administrator policy violations.

Global Intelligence

Leveraging the BESG large, diverse and global customer base, makes this Anti-Spam firewall the most advanced in detecting early malicious trends and responding to email-borne threats.
